2. Terms and concepts used

2.1. Root directory - the root directory of the FTP server that stores all the files on your website, usually www or public_html
2.2. COD - Cash On Delivery service
SSH - A network protocol that securely connects to a server
(https://en.wikipedia.org/wiki/SSH)

3. Recommended tools to use

3.1. To load the Omniva LT module software, you will need a tool to connect to the FTP server, you can use the following tools to connect to the FTP server or choose another one you know:

- FileZilla Client (https://filezilla-project.org/)
- WinSCP (https://winscp.net/eng/download.php)
- Cyberduck (https://cyberduck.io)

3.2. Windows users can use PUTTY (https://www.putty.org/) for SSH connection, Linux and MacOS users can use the Terminal to connect to the server
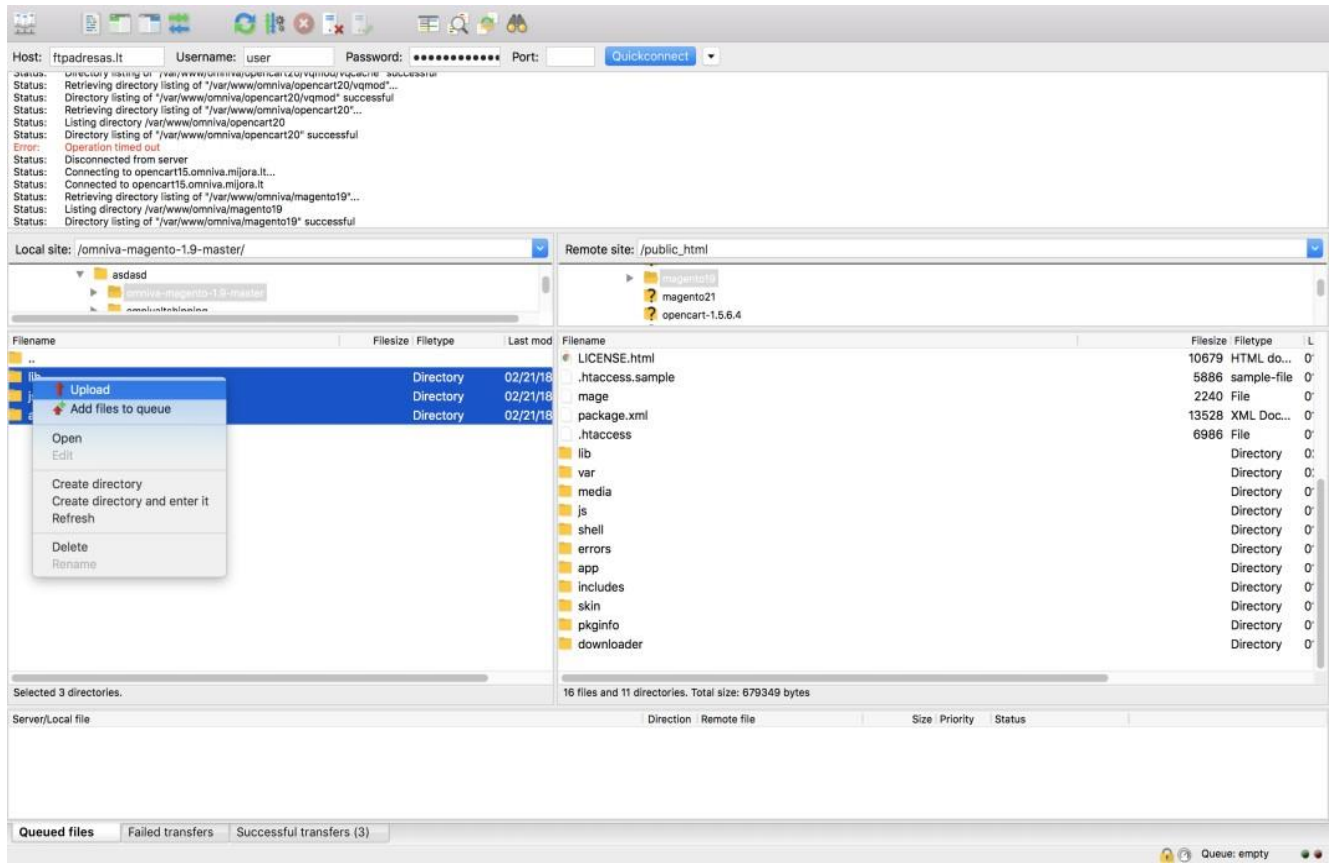

4. E - shop requirements

4.1. Module is compatible with Magento 2.1 - 2.4 versions

5. Server requirements

5.1. The module is compatible with PHP 7.0 and higher, before installation, find out if the server has PHP 7.0 or higher. SSH access, with the right to edit, create and delete files

6. Omniva module installation

6.1. Extract Omniva LT module
6.2. Upload extracted files to root directo

omniva

6.3. Connect to server with SSH access and run commands from root directory:

composer require mijora/omniva-api
php bin/magento setup:upgrade
php -d memory_limit=2G bin/magento setup:di:compile
php bin/magento setup:static-content:deploy --language
lt_LT php bin/magento setup:static-content:deploy --
language en_US php bin/magento indexer:reindex php
bin/magento cache:flush

Important: if uploading files or running commands used other account then web service, will be needed to fix file access rights.
