Instruction for installation of Omniva local shipments – PrestaShop 1.6-1.7 module
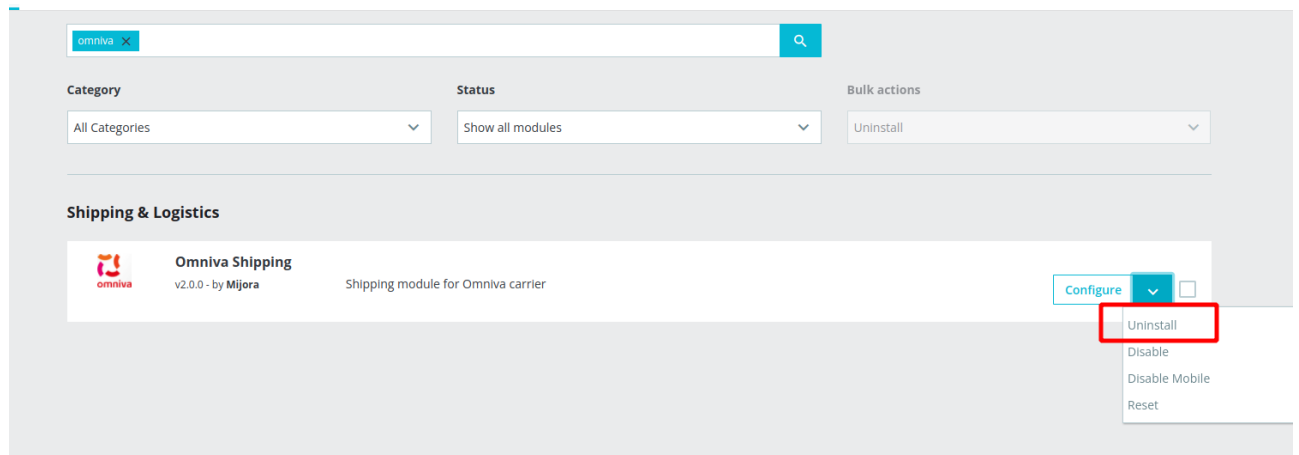

Contents

omniva

1. Module functionality

1.1. Parcel delivery service to post offices located in Lithuania, Latvia and Estonia.
1.2. Courier delivery service in Lithuania, Latvia, Estonia.
1.3. Collection of parcels from Omniva post offices in Lithuania.
1.4. Possibility to print shipping labels
1.5. Possibility to print the parcel manifest
1.6. Ability to call a courier directly from the e-shop administration.
1.7. COD (Cash Collection Service).
1.8. Label Generation History.

2. Module Requirements

2.1. If you are using version 1.x of the module, it must be completely uninstalled. To do is, find the module in the list of modules and click "Uninstall":

2.2. **Attention!** Uninstalling the module will result in the loss of all information related to Omniva orders. You must complete all shipments and manifests before upgrading the module to version 2.x. A number of technical changes have been made to the 2.x module to improve compatibility and support. One such change is the removal of the Prestashop Cart class override. If you have integrations that depend on this override, update the module only after consulting the IT professionals who maintain your store. You can also consult the company that maintains the module at this email: **omniva@mijora.lt**

3. Server requirements

3.1. The module is compatible with PHP 5.6 and higher versions of PHP. Before installing, make sure you have PHP 5.6 or higher installed on your server.
omniva

4. Installation Procedure

4.1. Before installing the Omniva LT upload module, make sure you have a login to the Omniva LT *Web Service* data (these credentials are different from the credentials to the customer system, if you do not have these credentials, contact the Omniva LT manager).
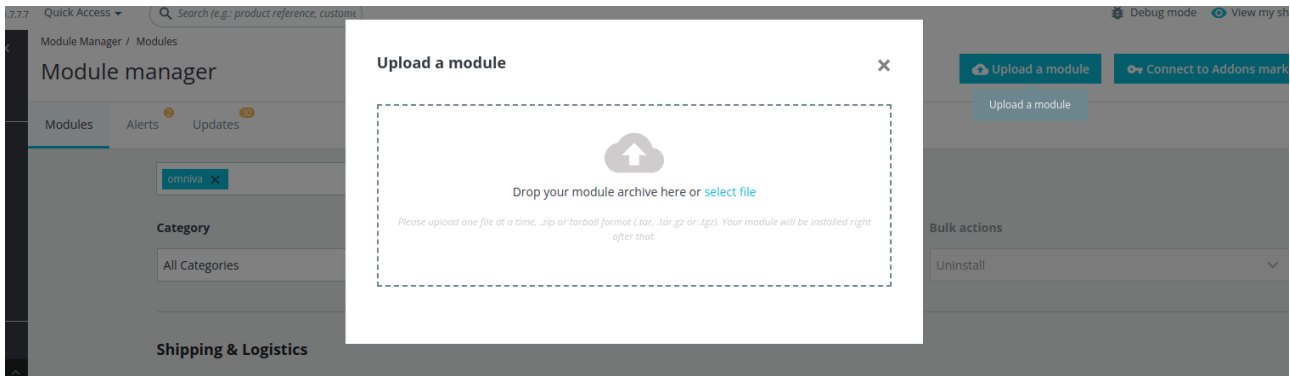

5. Omniva LT module

5.1. Before installing the Omniva LT module, it is necessary to extract the downloaded ZIP archive and rename the main folder to *omnivaltshipping* and compress it again to the ZIP archive.

    5.1.1.1.   After logging in to the administrative environment, you must select the menu item **Modules.**

    5.1.1.2.   In the upper right corner, click the **Upload module**.

    5.1.1.3.   In the window that appears below, click the **Select file** and in the window that opens, navigate to the ZIP archive named **omnivaltshipping**. Select it.

    5.1.1.4.   When the module is loaded, it will appear in the list of modules. Then clicking the **Install** will successfully install the module and a settings window will open in which you have to enter the store and login information.

5.1.1.5.   After entering the information about the company and the users, you need to configure the desired delivery methods and prices. You can do this via the standard PrestaShop interface by clicking ***Delivery / Couriers***.

5.2. The Omniva LT shipping module creates 2 delivery options:
    5.2.1.1.   Delivery ***by courier*** (if you want your shipments to be delivered to the specified address).
    5.2.1.2.   Delivery to ***the Parcel terminal "*** (if you want your shipments to be delivered to the selected Omniva LT post office).
5.3. Service setup is done in the usual PrestaShop procedure, as is any adjustment or creation of any delivery method. **Important:** You cannot delete the created delivery methods, as you will not be able to use the services of the module. More information on PrestaShop delivery configuring can   be found at: http://doc.prestashop.com/display/PS17/Shipping+Preferences
